Replacement filter kit for installation of antistatic cartridges on DFC11 purifiers

Insight

- **Compatibility**: kit suitable for DFC11 purifiers
- **Use**: this type of treatment is the solution for all applications that require the elimination of electrical charges that build up on the dust to be filtered and therefore on the filter cartridges. The antistatic polyester is made using a spunbonded process that ensures no variation in air permeability, allowing for better filtration efficiency and high stability. The surface electrical conductivity of this type of filter fabric is obtained by applying aluminum powders, creating a support that guarantees excellent porosity to the fabric.
