

Anti-sparking front wall for SBC benches

📌 Sectors

📌 Applications **Fix**

📌 Issues **Fumes**

COD: PARSB0000000000

Anti-rebound front wall for SBC benches, consisting of a suction metal mesh net placed on the front of the bench for operator protection from splinters and sparks from high-speed grinding.

Insight

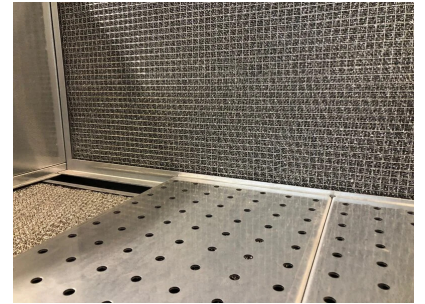

Suction front panel of adequate thickness in anti-rebound wire mesh to stop sparks and any grinding chips from bouncing off the operator.

Easily removable for maintenance and cleaning.

Compatible with all SBC series benches

The **SBC extraction bench** is available in 4 different sizes ranging from 1 to 3 meters. Designed to extract fumes and dust during professional operations that produce emissions that are hazardous to operators and the working environment due to their high volatility. This version is suitable for intensive use thanks to its **compressed air cleaning cartridge filters**, which guarantee maximum filtration efficiency at the end of the cycle and a long service life.
